

The Cavour aircraft carrier: SELEX Sistemi Integrati's contribution

The central operational combat rooms within the Cavour aircraft carrier host 32 multifunctional consoles through which the backbone of the ship systems, the Combat Management System supplied by SELEX Sistemi Integrati, operates.

The main operations are shown on a major console set on the bridge, displaying the main operations of the command and control system delivered by the Finmeccanica company.

Through the CMS it is possible to manage the various systems onboard, most of which having been supplied by SELEX Sistemi Integrati. Among them there are the surface surveillance radar RASS, the RAN 40 L a naval surveillance radar, the multifunctional EMPAR and the fire control systems. Besides these equipments there are navigation sensors and systems used to exchange information among the onboard systems.
